Discover *The Genes We Share* at the Dolan DNA Learning Center!

The human genome is the vast instruction manual for our bodies, the code that makes us both similar and different, the record of our shared ancestry, and a source of information that could foreshadow a person's future health. Explore the human genome in the Dolan DNA Learning Center's new exhibition, *The Genes We Share*.

Help us celebrate the 50th anniversary of the discovery of the DNA structure, which set the stage for recent efforts to determine the entire DNA sequence of the human genome.

In this hands-on exhibition, you can: follow the path of ancient humans across the globe; compare your characteristics to see how unique you are; find out how DNA sequencers churn through the three billion bases of our genome; see the first reconstruction of an adult Neandertal skeleton; and take a tour through the genome, and stop at important "landmarks" along the way . . .

Hours:

10 am – 4 pm Monday – Friday

12 pm – 4 pm Saturday

Dolan DNA Learning Center

334 Main Street

Cold Spring Harbor, NY 11724

Ph. (516) 367-5170

Funding for this exhibition has been provided in part by the Richard Lounsbery Foundation, The William A. Haseltine Foundation for Medical Sciences and The Arts, and Tularik Inc.

Support for the Dolan DNA Learning Center's Exhibition Program has been provided by Laurie J. Landeau, V.M.D.
